

CertifyPro

School Certificate Management Platform

Client Guide

A simple overview of roles, login links, student records, certificates, wallet, cart, and approvals.

Prepared for client demonstrations

Version 1.0 | 2026

CertifyPro at a glance

A multi-tenant platform for schools, distributors, and certificate operations

CertifyPro helps a school maintain student records, generate official documents, manage wallet payments, and keep certificate activity traceable. The platform supports English, Marathi, and Hindi labels across the main interface.

What the application covers

Area	What the client can do
Students	Create, edit, view, photo capture/upload, and bulk import student records.
Certificates	Generate Leaving Certificates, Bonafide Certificates, and Student ID Cards.
Wallet	Recharge through a bank/QR request, track ledger entries, and monitor balance.
Cart	Add multiple certificate requests, review the total, then submit together.
Approvals	Review school, distributor, recharge, camp, and hard-copy requests according to role.
Reports	View platform analytics and export operational data to Excel or CSV.
Security	Role-based access, audit logs, password setup/reset, rate limits, and QR verification.

Role responsibilities

Role	Main responsibility
Super Admin	Controls the platform, schools, distributors, master data, approvals, wallet settings, reports, and users.
School Admin	Manages one school, its students, certificate requests, wallet, notifications, and downloads.
Distributor	Manages assigned schools, school requests, commission view, camps, and physical ID-card requests.
Super Distributor	Manages assigned distributors and schools, and tracks higher-level requests and settings.

Separate login links

Share only the link that belongs to the user

The application now uses one login URL per role. The home URL opens the School Admin login by default and does not display a list of all roles. Each role-specific page shows only its own login form.

Important

Replace [YOUR-DOMAIN] with the live application domain when sharing links. These are application paths, not separate applications.

Role	Login URL path	What is shown
Super Admin	/login/super-admin	Super Admin email and password form only
School Admin	/login/school	School Login ID and password form only
Distributor	/login/distributor	Distributor username and password form only
Super Distributor	/login/super-distributor	Super Distributor email and password form only

Recommended sharing format

[YOUR-DOMAIN]/login/school - share with a school administrator

[YOUR-DOMAIN]/login/distributor - share with a distributor

[YOUR-DOMAIN]/login/super-distributor - share with a super distributor

[YOUR-DOMAIN]/login/super-admin - share only with the platform owner

Security note

Do not share the Super Admin link or credentials with schools or distributors. User permissions are checked again after login, so a role cannot open another role's protected dashboard.

First-time account activation

- New accounts can receive a secure password setup link instead of a permanent password in plain text.
- Users should set a strong password and keep credentials private.
- Forgot Password and Set Password pages are available from the login flow.

School Admin workflow

The day-to-day certificate process

1. Add students

- Open Students and create a student record with name, admission details, parent details, birth date, and photo.
- Use camera capture or file upload for the student photo.
- For a large list, use Excel/CSV import and download the validation report if any rows fail.

2. Prepare a certificate

- Open Certificates and choose Leaving Certificate, Bonafide Certificate, or ID Card.
- Select the student and complete the type-specific fields.
- Use Preview before adding the request to the cart.

3. Add to cart

- Click Add to Cart. A prominent confirmation toast appears at the top-right and includes a View cart action.
- The Cart tab badge shows the number of requests currently waiting for submission.

4. Submit and verify

- Review every item, the total price, and the available wallet balance.
- Click Submit All. If the wallet is sufficient, the system sends a one-time OTP to the school email.
- Enter the six-digit OTP to confirm the batch and generate the certificates.
- Download generated PDFs from the result panel or Recent Certificates list.

OTP requirement

Real OTP delivery requires SMTP or an approved transactional email provider to be configured. If it is not configured, the system now shows a clear error and does not keep an unusable OTP record.

Certificate types

Type	Use	Typical output
Leaving Certificate	Leaving/transfer record with leaving date, reason, remarks, QR, and school branding.	A4 PDF

Bonafide Certificate	Proof that the student belongs to the school for a stated purpose.	A4 PDF
Student ID Card	Student identity card with photo and school details.	Soft-copy PDF or hard-copy request

Wallet, approvals, and operations

How money and requests move through the system

Wallet and recharge

- Each school has a wallet balance used for certificate generation and eligible ID-card requests.
- The school submits a recharge request with amount, UTR number, payment date, and proof screenshot.
- The authorized administrator reviews and approves or rejects the request. Approved amounts are credited atomically and recorded in the ledger.
- Low-balance and transaction notifications help the school avoid interruptions.

Distributor operations

- Distributors can add schools, track approval status, view live commission calculations, manage profile settings, and follow assigned requests.
- Super Distributors can manage their assigned distributors and schools and monitor their request queues.

Super Admin operations

- Approve, reject, suspend, and soft-delete schools and distributors.
- Manage master data categories, bank/QR payment details, audit records, reports, and platform settings.
- Export schools, distributors, certificates, wallet transactions, master data, and users to Excel/CSV.

QR verification

Generated certificates include a real scannable QR URL that opens a public verification page. A recipient can scan the QR without logging in and confirm the certificate record.

Client demonstration checklist

Demo step	Show this in the application
Login	Open the role-specific URL and show that only the correct form appears.
Student	Create one student and upload a photo.
Preview	Preview an LC or Bonafide certificate before purchase.
Cart	Add one or more requests and show the confirmation toast and cart badge.

Wallet	Show balance, recharge request, and transaction ledger.
Generate	Submit the cart, enter OTP after email setup, then download the PDF.
Verify	Scan or open the certificate QR and show public verification.
